30 2011 067 172

**Terms and Abbreviations**

ESD (Electro Static Discharge) stands for electrostatic discharge. It refers to a rapid transfer of charges between bodies with different electrostatic potentials.

Standards

DIN EN 61340-5-1 addresses electrostatics in Part 5-1, specifically the protection of electronic components against electrostatic phenomena. This standard covers general requirements (IEC 61340-5-1:2016).

DIN EN IEC 61340-5-3 deals with the protection of electronic components against electrostatic phenomena. It specifies properties and requirements for the classification of packaging used for components sensitive to electrostatic discharges (IEC 101/618/CDV:2021).

Resistance of conductive materials (according to DIN EN 61340-5-3):

Conductive materials can be surface conductive, volume conductive, or both.

Surface conductive materials (Dissipative): Surface conductive material must have a surface resistance of $\geq 1 \times 10^4$ to $< 1 \times 10^{11}$ ohms.

Volume conductive materials (Dissipative): Volume conductive material must have a surface resistance of $\geq 1 \times 10^4$ to $< 1 \times 10^{11}$ ohms.

SMD boxes – non-conductive
